No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                      Score

                                                                                                                                                                                                                                                                                                11-JUL-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to a method for the protection against infection of a polkilothermic fish by the bacterial pathogen, Piscirickettsia P. salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed Ospa, or an immunogenic fragment of particularly poikilothermic fish, against the bacterial pathogen particularly poikilothermic fish, against the bacterial pathogen rickettsial septicaemia (SRS) and other rickettsial diseases. The present encoding Ospa 17E2 (AAF86247) has been optimised for expression in Ecsherichia coli. An Ospa protein with an N-terminal fusion partner is used in a vaccine to create an anti-Ospa antibody response.
                                                                                                                                                                                                                                                                                                                                                                                                             121
                                                                                                                                                                                                                                                                                                                                                                                                                                     121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                salmonis. The method comprises administering an immunogenic amount of a p. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animals, p. salmonis. The method is also useful for protecting apathogen rickettsial septicaemia (SRS) and other rickettsial diseases. The present sequence represents the amino acid sequence of C17E2, a p. salmonis OspA undefined W-terminal fusion partner. The fusion protein is used in a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention relates to a method for the protection against infection of a poikilothermic fish by the bacterial pathogen, Piscirickettsia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Method for protecting poikilothermic fish against salmonid rickettsial septicaemia and other rickettsial diseases comprises administering a vaccine containing the OspA protein of Piscirickettsia salmonis
                                                                                                                                                                                                                                                                                                                                                            216

                                                                                                                                                                                                                                                                                                             This invention relates to a method for the protection against infection of a polikilothermic fish by the bacterial pathogen, Piscirickettsia salmonis. The method comprises administering an immunogenic amount of a P. salmonis specific antigen termed OspA, or an immunogenic fragment of OspA in the form of a vaccine. The method is used for protecting animal particularly polikilothermic fish, against the bacterial pathogen P. salmonis. The method is also useful for protecting against salmonid rickettsial septicaemia (SRS) and other rickettsial diseases. The presest sequence represents P. salmonis OspA protein. An OspA protein with an N-terminal fusion partner is used in a vaccine to create an anti-OspA antibody.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Method for protecting poikilothermic fish against salmonid rickettsial septicaemia and other rickettsial diseases comprises administering a septicaemia and other rickettsial diseases comprises administering a

The present sequence is that of BASB113 protein from Moraxella catarrhalis strain Mc2931 (ATCC 43617), a causative agent of otitis media in children and pneumonia in adults. The invention provides BASB113 polypeptides, and polypucleotides encoding them, as well as expression vectors, host cells and methods for producing BASB113 polypeptides using recombinant methods. Also claimed is a vaccine composition comprising a BASB113 polypeptide, an immunogenic
                                                                                                                                         Claim 1; Page 67; 86pp;
                                                                                                                                                       New BASB113 polypeptide isolated from Moraxella catarrhalis bacterium, useful for diagnosing and producing vaccines against bacterial infections such as otitis media and pneumonia
                                                                                                                                                                                                                                         WPI; 2001-112458/12.

This invention relates to a of a poikilothermic fish by

Example 2; Page 17; 35pp; English.

Method for protecting poikilothermic fish against salmonid rickettsial septicaemia and other rickettsial diseases comprises administering a vaccine containing the OspA protein of Piscirickettsia salmonis -

of a political particular processes an immunogenic animals, salmonis. The method comprises administering an immunogenic amount of a particularly politic antigen termed OspA, or an immunogenic fragment of particularly politic termed ospA, or an immunogenic fragment of particularly politic termed ospA, or an immunogenic fragment of particularly politic termed ospA, or an immunogenic fragment of particularly politic termed ospA, or an immunogenic fragment of particularly politic termed ospA, or an immunogenic fish, against the bacterial pathogen nickettsial septicaemia (SRS) and other protecting against salmonid sequence represents an immunogenic epitope of the P. salmonis OspA protein. The peptide is used to raise rabbit anti-OspA antibodies.

The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease especially gingivitis.
AAX91536 to AAX91801 encode two hundred and sixty six antigenic Porphorymonas gingivalis (PG) polypeptide sequences given in AAX34318 to AAX94583. AAX91802 to AAX91989 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease especially gingivitis.
                                                                                                                                                                                                                                                            with lysozyme, opt. in the presence of a detergent. The encoding the PBOMP proteins were isolated by screening with an oligonucleotide probe based on the amino acid s PBOMP protein, or using antibodies to PBOMP.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The PBOMP proteins were isolated from a PBOMP-enriched insoluble cell wall fraction from physically disrupted cells of H. influenzae and then solubilising the PBOMP from the cell wall fraction by heat
                                                                                                                                                                                                                                                                                                                                               in the presence of a detergent or digesting the cell wall fraction with lysozyme, opt. in the presence of a detergent. The genes encoding the PBOMP proteins were isolated by screening a DNA library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Outer membrane protein epitopes of Haemophilus the prodn. of antibodies, in vaccines and for produced the produce of antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            WPI; 1990-115815/15.

CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC and gene mapping, and in recombinant production of (II). The CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as CC imaging of sites expressing (II). (I) and (II) are useful in medical CC disorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, identification of mutations in CC responsible for genetic disorders or other traits to assess biodiversity CC and to produce other types of data and products dependent on DNA and CC whote: The sequences. ABG00010-ABG30377 represent novel human CC wote: The sequence data for this patent did not appear in the printed composition, but was obtained in electronic format directly from WIPO
                                                                                                             Query Match

C proteins by hydrolysing many of the macromolecules while leaving the structural proteins intact. In the case of silk proteins, the C chromatography and processed into an aqueous-based mixture for into vector pET24 for recombinant expression in Escherichia coli, containing denaturant (3 M guanidine-HCl) and by affinity containing denaturant (3 M guanidine-HCl) and by affinity containing denaturant (3 M guanidine-HCl) and by affinity containing denaturant of the invention can be used in the construction of many ballistic protection, parachutes and parachute cords. The new fewer steps, requires less time and smaller volumes of reagents,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches
                                                                                                                                                                                                                                                                                      capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                        The sequence data for this patent did not form specification, but was obtained in electronic f at ftp.wipo.int/pub/published_pct_sequences.

The inventiuseful in developmental biology and in elucidating cell signalling a cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded protein sequences (ABL16175) and the encoded protein the printed (ABB57737-ABB72072).

                                                                                                                                                                                                                                     Matches
                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                          Recombinant or substantially pure preparations of H. pylori polypeptides are disclosed, together with the nucleic acids encoding them. In all, 97 ORFS are shown. The proteins are variously cell envelope proteins, cytoplasmic proteins, secreted proteins or other cellular proteins. Vaccines containing the nucleic acids or proteins are claimed, as are probes containing at least 8 nucleotides from the nucleic acid sequences. The vaccines are useful for treating or reducing the risk of H. pylori infections, and the probes can be used diagnostically for detecting the presence of Helicobacter in a sample. The products are also of use in screening for compounds having the ability to interfere with the H. pylori life cycle or to inhibit H. pylori infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated Helicobacter pylori nucleic acids - used to develop products for the diagnosis, prevention and treatment of infection H. pylori and other Helicobacter species {\sf H}

Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the 18 partial 2; on bw sp, the same strain used for the BDGP's pland EST libraries. A more detailed description of the library

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          USA
10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to
                                                                                                                                 was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to
